Summary

AI & Automation Engineer intern with a strong foundation in building scalable, production-grade machine learning systems and cloud-native applications. Experienced in developing LLM-powered applications, retrieval-augmented systems, and end-to-end ML pipelines using Azure and modern AI frameworks. Passionate about enabling real-world impact through robust, efficient, and scalable AI infrastructure.

Education

Worcester Polytechnic Institute

Jan 2025 – Dec 2026

MS in Artificial Intelligence

- GPA: 4.0/4.0 cumulative ([Transcript here](#) 🔗)

Industry Experience

AI & Automation Intern

Wakefield, MA

TÜV SÜD America, Inc.

Dec 2025 - present

- Engineered a production-grade LLM-powered chatbot system with document ingestion and contextual memory
- Built end-to-end data pipelines using Azure SQL, Azure Storage, and Azure AI services to process and transform large-scale compliance data
- Designed and deployed cloud-native applications using Azure App Services with CI/CD pipelines and optimized system performance for latency, scalability, and reliability in production environments

AI Specialist (Part Time, On-Campus)

Worcester, MA

Global Lab, Innovation Studio, WPI

Sep 2025 - May 2025

- Developed a real-time, voice-enabled AI system integrating STT (Whisper), LLM reasoning, and TTS pipelines
- Designed hybrid retrieval pipelines (FAISS + keyword search) to support contextual grounding in AI responses
- Built modular backend architecture to support scalable, low-latency inference workflows

Data Engineer

Lalitpur, Nepal

Cedar Gate Technologies

July 2023 – Dec 2024

- Onboarded healthcare datasets from multiple U.S.-based clients, ensuring data integrity and consistency across ingestion pipelines and contributed to the scalable ETL integration framework at Cedar Gate Technologies, a US-based healthcare analytics company with operations in Nepal.

Projects Experience

Adversarial Attack via Knowledge Distillation

Jan 2025 - May 2025

Mentor: [Prof. Raha Moraffah](#) Paper: [here](#) 🔗

- Built a scalable framework for generating adversarial examples using multi-teacher distillation pipelines and optimized computation to achieve 6× faster generation, improving efficiency of evaluation workflows

Microsoft Academic Graph Information Retrieval for Research Recommendation and Assistance

Sep 2025 - Dec 2025

Mentor: [Prof. Xiaozhong Liu](#) Paper: [here](#) 🔗

- Designed and implemented a modular, attention-based graph retrieval pipeline to optimize structured knowledge extraction and retrieval efficiency, enabling scalable AI-assisted recommendation systems and downstream reasoning workflows.**

Skills

- **Programming Languages:** Python, C#, C++; **ML/DL Frameworks:** TensorFlow, PyTorch, Keras, scikit-learn, Hugging Face, LangChain, LangGraph, RAG systems, Prompt Engineering; **Databases & Storage:** SQL, Amazon S3; **Visualization:** Tableau, Power BI; **Cloud & Infrastructure:** Azure (App Services, Storage, SQL, Azure OpenAI), Azure DevOps, Docker; **Low-Code Platforms:** Microsoft Power Platform (Power Automate, Power Apps)
